(1) The statements that the old fighter regiments were transferred to the U.S.G.R. and that only a small number of aircraft remained agree with previous information. However, it is doubted that the two OATBs were transferred to the U.S.G.R. because, according to previous reports, fuel was repeatedly shipped from Velten fuel depot in November and December 1951 to the two units CLASSIFICATION SECRET 25X1 Document No. No Change in Gass. 		After 7 December, Grossenhain airfield was again occupied by two new fighter regiments with new personnel who conducted initial jet pilot training. The information that the new personnel were trained by pilots of the old regiments who were left behind is believed to be correct. The small number of MiG-15s	
25X1		agrees with the observations and confirms the previous	
25/(1		assumption that the new regiments have not been equipped with aircraft to	
		their authorized strength	•
25X1	(2)		
	(3)	The type of flying observed agrees with all reports received from other air-	
		fields occupied by new fighter regiments and confirms that, to the present,	
		only initial flying was practiced with MiG-15s.	

The statements on searchlight activity during night flying agree with previous information received from other airfields of the Twenty-Fourth Air Army. This detailed description is received for the first time.
